Experience

Wells Fargo

July 2022 - March 2025

Software Engineer

San Francisco, CA

- Automate and maintain CI/CD and data ingestion pipelines on Linux using Jenkins, Autosys, and Git in an Agile SDLC to reduce deployment overhead by 30% and onboard 3 partner teams
- Build software test and observability infrastructure — SLA alerting, automated validation, and structured logging — achieving 95%+ code coverage and eliminating recurring customer-impacting outages
- Coordinate 10+ zero-downtime production releases with QA and infrastructure teams, enforcing schema changes, data validation rules, and deployment runbooks across the architecture
- Develop Python and Shell scripts on Linux to ETL 1M+ daily records with lineage tracking, data validation, and SLA alerting, improving pipeline reliability by 25% and saving downstream teams 6+ hours weekly
- Design and optimize 50+ Oracle DB relational data models with SQL performance tuning, reducing query latency by 15% and enabling same-day data pipelines for real-time business dashboards
- Resolve race conditions and concurrency issues through system-level investigations of data pipelines by fixing missing job dependencies, which reduces failure rates by 80%
- Perform EDA and preprocessing on 1 year of customer interaction data, identify behavioral patterns, and incorporate them into a Facebook Prophet forecasting model, improving forecast accuracy by 5%
- Lead root cause analysis, code reviews, and junior engineer mentoring across 5+ teams on data validation, debugging, and engineering standards while maintaining requirements documentation

Projects

Matcha Map | Java, Spring Boot, PostgreSQL, Docker, Kubernetes, AWS

January 2026 - Present

- Built Spring Boot REST API with PostgreSQL managing 12+ locations; implemented 8 CRUD endpoints using JPA/Hibernate with normalized schema and geospatial data storage
- Integrated Google Maps API for interactive location visualization with city-based filtering; containerized application with Docker
- Deployed to AWS EKS with Kubernetes; configured ConfigMaps, Secrets, persistent volumes, and GitHub Actions CI/CD for zero-downtime deployments

Skills

Languages: Python | Java | C++ | JavaScript | SQL | Bash | Shell Scripting | MATLAB

Backend & Frameworks: Spring Boot | Django | Flask | REST APIs

Data Engineering & Tools: Oracle DB | PostgreSQL | MySQL | ETL/ELT pipelines | Informatica | Pandas | NumPy | Data Modeling | Microsoft Office Suite

DevOps: AWS | Docker | Kubernetes | Jenkins | CI/CD | Git | Linux | Autosys | Jira | Confluence | Agile

Education

University of California San Diego | Bachelor of Science, Mathematics - Computer Science September 2022

Key Coursework: Data Structures, Algorithms, Supervised Machine Learning, Deep Learning for NLP
