Experience

Wells Fargo

July 2022 - March 2025

Software Engineer

San Francisco, CA

- Build scalable ETL pipelines using Python and Shell to process 1M+ financial records daily, implementing data quality checks and lineage tracking that improve pipeline reliability by 25%, saving risk teams 6+ hours weekly
- Design and build distributed backend services in Python and Java across 5+ cross-functional teams, diagnosing concurrency issues and resolving race conditions through system-level investigation to reduce failure rates by 80%
- Design and optimize 50+ relational models in Oracle DB using SQL to improve query latency by 15% and enable scalability for downstream ETL/ELT workflows and same-day reporting for the analytics teams
- Automate data ingestion and CI/CD pipelines using Autosys for job orchestration, Jenkins, and Git on Linux within a Scrum framework across the SDLC, reducing deployment overhead by 30% and onboarding 3 partner teams
- Led preprocessing and EDA on 1 year of customer call volume data for the Wealth & Investment team; uncovered seasonal patterns and incorporated them into an FB Prophet forecasting model, improving MAPE by 5%
- Build an observability tooling including SLA alerting, data quality monitoring, and logging instrumentation, achieving 95%+ code coverage and eliminating quarterly customer-impacting outages
- Enforce engineering standards across 5+ teams by leading root cause analysis across Linux environments using system-level logs to drive production fixes; conducted code reviews and enforced data validation standards
- Coordinate 10+ production releases with QA and infrastructure teams, enforcing schema changes, data validation rules, and executing zero-downtime deployments across the full release lifecycle

San Diego Supercomputer Center

June 2021 - August 2021

Software Engineer Intern

San Diego, CA

- Built frontend features and backend integrations for a full-stack fitness networking app with React, Django, and MySQL, improving usability scores by 30%
- Collaborated in an Agile team of 5 developers, completing 4 sprint iterations and presenting product demos that accelerated feature feedback and reduced rework time by 15%

Projects

Matcha Map | Java, Spring Boot, PostgreSQL, Docker, Kubernetes, AWS

January 2026 - Present

- Built Spring Boot API with PostgreSQL managing 12+ locations; implemented CRUD operations with JPA/Hibernate, designed a normalized schema with geospatial data, and integrated Google Maps API
- Deployed to AWS EKS with Kubernetes using ConfigMaps, Secrets, persistent volumes, and load balancing for production reliability

Skills

Languages: Python | Java | C++ | JavaScript | SQL | Bash | Shell Scripting | MATLAB

Backend & Frameworks: Spring Boot | Django | Flask | REST APIs

Data Engineering: Oracle DB | PostgreSQL | ETL/ELT Pipelines | Informatica | Data Modeling

DevOps & Tools: AWS | Docker | Kubernetes | Jenkins | CI/CD | Git | Linux | Autosys | Jira | Jama Connect | Agile

Education

University of California, San Diego | B.S. Mathematics - Computer Science

September 2022

Key Coursework: Data Structures, Algorithms, Supervised Machine Learning, Deep Learning for NLP
